MMStex®
Garment Management System

MMStex®
Garment Management System

The **MMStex® Garment Management System** is an integral solution for the logistical management of work clothes (textiles and non-textiles) and/or bedding at the point of consumption, which guarantees a 24/7 service. For the storage and delivery of the clean garment, there are disposable garment dispensing modules with RFID technology for managing the traceability of the garment, and/or smart locker modules with access control and RFID technology for management of inventory/consumption after closing the door. For the return of dirty garments (washable), hopper-type equipment with RFID technology is available to manage traceability of returned garments. The system is completed with the **MMStex® Software Manager**, a web application that guarantees on-line and real time management of garments, users and equipments.

Functionality Highlights

24 Hour Service	Clothing Traceability	Shorter Operating Times	Flexibility of Location & Scalable Solution	Patented Dispensing Solution	Financial Savings

MMStex® Operational Circuit

Reception and garments coding
